Difficulty Level

Study Notes

> [!invalid] Content mismatch Transcription = winget install log + chat panel dump. Zero discrete math material. Archived as-is. Re-transcribe source or fix metadata.

Winget Batch Install Log

winget batch run, 13 packages total. Log starts mid-run — leading successfully installed line (confirmed in re-transcription) belongs to earlier package ($\leq 3/13$, not captured).

4/13 — NVIDIA GeForce NOW — FAILED

> [!invalid] Installer crash - Package: Nvidia.GeForceNow v2.0.86.124 - Source: <https://aka.ms/nvidia-gfn-app/GeForceNOW-release-64EASC.exe> (170 MB / 170 MB) - Hash verified OK - Exit code: 3221225477 = 0xC0000005 (STATUS_ACCESS_VIOLATION) — installer process crashed. Not hash failure, not network failure. - Fix path: retry; if persists, run installer standalone, check GPU driver + OS build, try newer package version.

5/13 — Git — OK

> [!valid] Installed clean - Package: Git.Git v2.54.0 - Source: <https://github.com/git-for-windows/git/releases/download/v2.54.0.windows.1/Git-2.54.0-64-bit.exe> (62.1 MB / 62.1 MB) - Hash verified, install succeeded.

6/13 — GitHub Desktop — IN PROGRESS

> [!example] Capture cut mid-download - Package: GitHub.GitHubDesktop v3.5.12 - Source: <https://desktop.githubusercontent.com/releases/3.5.12-c6aad713/GitHubDesktopSetup-x64.exe> - Progress: 99.4 MB / 181 MB — no completion status in log.

Chat Panel Log

Verbatim capture. Session context = machine setup for gaming ("mc" = Minecraft implied).
